**Lab 1.2**

You need to set up a new computer that will be used by three users. Create the following user accounts:

- Create an account for Jane Doe named **DoeJ**. Jane needs to be able to perform all actions on the computer.
- Create an account for Sue Day named **DayS**. Mary needs to be able to back up and restore files, but should not have any other rights above those of a normal user.
- Create an account for Don May named **MayD**. Mark needs normal access to start the computer, run applications, and save files.

When creating the user accounts:

- Assign each account an initial password of **p@ssw0rd**
- Force the user to change the password at next logon.
- Assign group membership to allow each user to accomplish the required tasks without giving them too many rights.

After completing, take a screenshot of the each of the groups "Properties" window and save in one .jpg named *Lastname_Firstinitial_Lab1_2.jpg* and upload to this dropbox.
